
For Immediate Release

OneGIS Becomes Distributor for Cellular Expert™

Firm to Market RF Planning & Network Data Management Software

Atlanta GA, July 6, 2005 – OneGIS is pleased to announce that it has expanded its GIS product and service offerings by inking an agreement with HNIT-Baltic GeoInfoServisas (HB-GIS). The agreement names OneGIS as a representative for its Cellular Expert line of telecommunications network planning and management software for the wireless industry in the United States, Bermuda and the Caribbean. Cellular Expert is designed for mobile network operators, companies or government agencies with their own radio networks or radio transmission links, armed forces and consultants providing services in these areas.

Cellular Expert is an expandable and reliable application based on the industry leading GIS platform, ArcGIS™ from ESRI. The software handles all standard wireless technologies: mobile networks (GSM, DCS, PCS, NMT, CDMA2000); broadband wireless access networks (LMDS, MMDS, WiMAX, WLL); wireless transmission networks; and military and rescue networks (TETRA). The software offers data management, point-to-point profiling and visibility analysis, frequency planning and interference analysis, coverage prediction and best server analysis, drive test analysis, traffic spreading, statistical GIS analysis, visualization and reporting. OneGIS will offer implementation, customization and integration services for the Cellular Expert line of software in addition to its traditional utility GIS system integration and implementation services.

Commenting on the agreement with HB-GIS, Chris Cirillo, president of OneGIS said, "With the rapid expansion of cellular, private radio networks and wireless broadband providers, it was an easy decision to offer services in this market, especially with our knowledge of ESRI-based applications. We wanted to seize the opportunity to become a distributor for this leading RF planning and design software. We look forward to supporting companies building out their radio networks with this feature-rich GIS application."

"We welcome OneGIS and look forward to supporting their marketing efforts in the region. We previously did not have a representative concentrating exclusively on the U.S. market. So we had to market our software from our offices in Europe." commented Jurate Venskeviciute, Telecommunication Solutions Marketing and Sales Manager for HNIT- Baltic GeoInfoServisas, UAB, "We have sold Cellular Expert to customers in many countries throughout the world. But it is much easier to provide marketing and client support through a local representative. So hopefully we will be able to serve even more customers as a result of OneGIS' local presence and their GIS expertise."

About OneGIS

OneGIS, Inc. is a full service consulting and outsourcing firm specializing in the development of turnkey GIS solutions for the electric, gas, water, wastewater, storm water, telecom and municipal government markets. Its goal is to provide off the shelf solutions that provide significant business benefit to organizations implementing Geographic Information Systems. OneGIS focuses its development, customization, and implementation

efforts solely on ESRI-based applications, thus offering solutions on the best GIS platform available in the market place. For further information, visit www.onegis.net.

About HNIT-Baltic GeoInfoServisas
