

For Immediate Release

OneGIS Hires Changming Du as Chief GIS Architect; Expands Web Development Capabilities

Atlanta GA, August 1, 2006 – OneGIS is pleased to announce that it has hired Mr. Changming Du as Chief GIS Architect to head up the company's efforts in web services and assist in the development of OneGIS applications and integration tools. Mr. Du will be responsible for overseeing the configuration and installation of web-based Geographic Information Systems using ArcGIS® Server and ArcIMS® from ESRI as well as third party applications and add-on tools developed by OneGIS. He comes to OneGIS from another ESRI business partner where he was a developer and team leader responsible for developing numerous web-based and desktop applications for the oil/gas pipeline and utility markets.

Mr. Du has fourteen years experience in the GIS industry where he has held the positions of GIS Planner, GIS Specialist/Programmer, Webmaster and Consulting Developer. He holds both a Bachelor and Master of Engineering from Tsinghua University, Beijing, China as well as a Masters in GIS Planning from the University of Cincinnati.

Commenting on the hire, Chris Cirillo, OneGIS President said, "We are pleased to have Changming on our staff. He brings an expertise in an area of the company that is growing rapidly – that of web services and web-GIS implementations. His experience with ESRI products, especially ArcObjects and ArcGIS Server, as well as COM and dot-Net will greatly enhance our capability to deliver quality GIS products and services in this fast-growing market segment. We welcome him to the OneGIS family."

About OneGIS

OneGIS is a full service consulting, system integration and outsourcing firm specializing in the development of turnkey GIS solutions for the electric, gas, water, wastewater, storm water, telecom, and municipal government markets. Its goal is to provide off the shelf solutions that provide significant business benefit to organizations implementing Geographic Information Systems. OneGIS focuses its development, customization, and implementation efforts solely on ESRI-based applications, thus offering solutions on the best GIS platform available in the market place.
